

CONTINUOUSLY PROTECTING WHAT MATTERS

Built by OccamSec, Incenter not only protects your organisation but empowers security teams to focus on the exposures that will have the most impact.

It stops you being overloaded with data, chasing shadows and the hassle of having to use (and buy!) multiple products.

Incenter combines automation with expert testing to continuously assess your organization, find problems and help you fix them.

Created by true security professionals,

Incenter is designed to go above and beyond traditional penetration testing, crowd sourcing and attack surface monitoring as a service.

It comes with practically zero deployment time, a continuously evolving range of features and operates with a focus on helping your organisation secure it's environment.

AUTOMATION WHERE POSSIBLE - HUMAN EXPERTISE WHERE NEEDED

Security testing is an extremely complex process. Incenter combines automation,

machine learning, and human expertise to uncover complex vulnerabilities and quickly determine what is less important, versus what could become a serious issue.

BEHAVING LIKE THE BAD GUYS

An average pen test usually takes 1-4 weeks. Potential attackers however, tend to work to longer time scales.

That's where Incenter comes into its own.

It allows organisations to test themselves to a high level over longer periods, ensuring you receive even greater protection.

THE IMPACT OF INCENTER

Incenter combines penetration testing, red teaming, vulnerability scanning, penetration test as a service. Plus, continuous testing, threat intelligence, and business context analysis all into one platform.

You could buy all these individually and try to integrate them. **Or you can use Incenter.**

Incenter doubles the effect of your current security team, freeing them to focus on the highest priorities.

PROTECTION THAT UNDERSTANDS YOUR BUSINESS

Understanding how attacks or issues will impact your organisation is essential.

However, business context is often not present in any vulnerability reports.

Incenter changes that.

It uses the data from your organization in order to place important exposures in better context.

ACTIONABLE INTELLIGENCE

Incenter is supported by OccamSec's intel team who collect data via automated and human collection methods.

This data is then analysed for intelligence which is utilised and made actionable.
